School of Computing and Creative Technologies

Assessment Brief

Submission details

Module title:	**Foundational Practice Team Project**
Module code:	UFCEJA-30-1
Module Leader:	Shelan Jeawak
Assessment title:	Portfolio
Year:	2025-26
Assessment type:	A portfolio of individual and group work (Written Assessment and code link) to be submitted on Blackboard
Assessment weighting:	100%
Size or length of assessment:	6-12 pages report for a group of 3-5 students
Module learning outcomes assessed by this task:	MO1: Research, Implement and evaluate a data science analysis task as part of a team. MO2: Communicate the findings of a data science project effectively. MO3: Reflect on personal effectiveness and identify learning goals as a result of active engagement with a shared project. MO4: Implement a shared technical platform and process for conducting a collaborative data science analysis, incorporating version control, secure data management and application code.
Use of AI in assessment:	You can use Generative AI tools in this assignment for research and for proofreading but not for writing the contents of your portfolio. We encourage you to use the UWE approved AI tool, Studiosity, to get feedback on your report writing and structure.

Guidance on Referencing (inc AI):

Please note that the aim of referencing is to demonstrate you have read and understood a range of sources to evidence your key points. You need to list the references consistently and in such a way as to ensure the reader can follow up on the sources for themselves. UWE Harvard style of referencing required.
Referencing - Study skills | UWE Bristol
Using generative AI at UWE Bristol - Study skills | UWE Bristol
You can use Generative AI in this assignment for research or for checking spelling, grammar etc., but not for writing your essay.
You can seek appropriate references using the resources provided by UWE Library. You can also use the resources available at Home Feed | ResearchGate https://www.researchgate.net/ . Google Scholar, https://scholar.google.com/ is another option. Finally, you can also try https://arxiv.org/ , a site maintained by Cornell University.

Submission and feedback dates

Submission deadline:

Before 14:00 on Thursday 23 April 2026
Is **NOT** eligible for 48-hour late submission window

All times are 24-hour clock, current local time (at time of submission) in the UK.

Submission format:

Each student must submit one combined PDF (6–12 pages total) containing the following three components:

1. **Team portfolio (5-10 pages):** This must be identical for all team members and must include the **GitLab link** to your project code.
2. **Individual Reflective Essay (1-2 pages):** A unique piece of writing documenting your personal contribution and learning.
3. **Peer Review Table:** Your individual ratings for your teammates.

Important Note: While the Group Report section must be the same for every member of your team, the Reflective Essay and Peer Review Table must be your own individual work.

Marks and Feedback due on:	21 May 2026

Marks and Feedback will be provided via:	**Formative Feedback**
	• Weekly Support: You will receive ongoing verbal feedback from your group mentor during weekly sessions.
	• Structured Peer Review: There will be two dedicated sessions to support your development:
	  ○ In-group self- and peer-review.
	  ○ Cross-group peer review of project artifacts.
	• All sessions will be facilitated and supported by your tutors.

	Summative Feedback • Final Results: Your final grade and formal written feedback will be released via Blackboard, detailing specific areas for improvement. • Individual Mark Adjustment: To ensure fair recognition of individual effort, all students are required to submit a peer-rating table with their report. Individual marks will be adjusted based on the team's average peer rating, as detailed below.

Completing your assessment

What am I required to do on this assessment?
In this first team-based project module, you will work in a group to complete a data science project of your choice, falling within one of two foundational themes: **Prediction Systems** or **Recommendation Systems**.
The assessment is a **Portfolio (100% weighting)** designed to evaluate both the team's ability to execute a structured data science process (70%) and your critical reflection on that process, including your professional growth, collaborative skills, and ethical awareness (30%).

Deliverables

You submission must include the following components in one document:

I. Team Portfolio (70% Weighting)

This component assesses the team's ability to execute a complete data science project based on the Technical Solution, Documentation, and Project Management.

1. **Project Planning & Requirements:** Define SMART Objectives, Functional/Non-functional requirements, a Work Breakdown Structure (WBS), a Gantt Chart, and a Risk Register.
2. **Technical Solution & Documentation:** Provide an organized, clean codebase and a professional, deployed output (e.g., Visualization or interactive dashboard). You must provide the GitLab link to your repository. Documentation must include a Literature Review and a Data Flow Diagram (DFD) to illustrate your system choice and architecture.
3. **Collaborative Process:** Evidence of Agile methods (sprints, logs) and a clean GitLab history showing shared ownership, regular commits from all members, and clearly defined team roles.
4. **Evaluation & Risk Reflection:** Analysis of test results, a post-mortem on the Risk Register, and evidence of how mentor/peer feedback was used to improve the final deliverables.

II. Individual Reflective Essay (30% Weighting)

This essay requires critical analysis of your personal journey through the project.

1. **Reflection on Role & Learning:** Analyze your specific contributions, team inclusivity practices, and how this project has shaped your future data science career goals.
2. **Using Feedback to Get Better:** Detail the formative feedback you received from both peers and mentors and analyse how you used that feedback to make specific, measurable improvements to your work or the project.
3. **Ethics, Data, & Tool Analysis:** Critical discussion on ethical/legal risks (Personal Identifiable Information- PII and result bias), the source of your public dataset, and a balanced analysis of the limitations/benefits of using GenAI and Studiosity.

III. Peer Review Table

The purpose of the peer review is to identify the relative contribution of each member. This confidential assessment allows for an uneven allocation of the group mark based on individual performance.

1. Scoring Criteria

Award each team member a score from **0–3** for the following factors:

- **Attendance:** Level of attendance at group meetings.
- **Engagement:** Level of contribution during group meetings.
- **Execution:** Level of contribution to tasks outside of meetings.
- **Innovation:** Suggestion of ideas and creative problem-solving.
- **Performance:** Reliable completion of assigned tasks.

Scoring Scale:

- **3:** Better than the rest of the group.
- **2:** About the same as the rest of the group.
- **1:** Not as good as the rest of the group.
- **0:** No contribution at all.

The submission table format:

	Team member 1 name	Team member 2 name	Team member 3 name	Team member 4 name
Attendance				
Engagement				
Execution				
Innovation				
Performance				
Average rate (total/5)				

2. The Mark Adjustment Formula

The normalized scores provided by all your teammates are summed to give you a **Total Score (T)**. If the team portfolio is awarded a mark of **M**, your individual mark for the team portfolio component will be calculated as:

Individual Mark = min(M $\sqrt{T}$, M + 5)

Example Calculation:

If the team portfolio mark (M) is **72%**:

- **High Contributor (T = 1.2):** min(72 × $\sqrt{1.2}$, 77) = 77%
- **Standard Contributor (T = 1.0):** min(72 × $\sqrt{1.0}$, 77) = 72%
- **Low Contributor (T = 0.7):** min(72 × $\sqrt{0.7}$, 77) = 60%

Important Rules:

- **Capping:** Individual marks can only be increased by a maximum of **5%** above the group mark.
- **Reductions:** There is no limit to how much a mark may be decreased for under-contribution.
- **Moderation:** Tutors reserve the right to scrutinize peer review forms and adjust scores where bias or inaccuracies are identified.

Where should I start?
The assessment is highly practical and iterative. You should start by focusing on scoping and process before deep technical work:

1. **Form Your Team and Choose a Theme:** Align on either the **Prediction Systems** or **Recommendation Systems** theme.
2. **Project Scoping:** Define your problem, identify potential data sources, and outline the initial system architecture. This forms the basis of your **Project Scoping/Design Document** (a key piece of process evidence).
3. **Literature Review:** Conduct initial research to find relevant papers or case studies. This will inform your methodology and help ensure your proposed solution is sound and well-justified. You will complete the first draft of your project literature review by the end phase 2 (Project Scoping & Planning) to get ready for phase 3 (Data Acquisition & Preparation). All the references must be cited and reported using UWE Harvard style referencing.
4. **Establish the Shared Platform:** Immediately set up your shared repository (e.g., GitHub) for version control and choose your project management tool (e.g., Trello/Kanban board) to start logging tasks and adopting **agile methods**.

What do I need to do to pass?
Refer to the marking criteria and achievement of the minimum mark of 40% or above.

How do I achieve high marks in this assessment?
High marks require going beyond functional correctness to demonstrate critical thinking, rigour, and advanced collaboration.

How does the learning and teaching relate to the assessment?
The entire module is designed around this assessment. We'll begin with a few **lectures and activities** in the first weeks to build your foundational skills. After that, the module shifts to a practical, applied approach where **tutors act as project stakeholders and mentors** for your team.

What additional resources may help me complete this assessment?

- Additional reading materials
- Specific UWE library study skills pages
    - https://www.uwe.ac.uk/study/study-support/study-skills
    - Critical thinking and writing - Reading and writing | UWE Bristol
    - Writing - Reading and writing | UWE Bristol
    - Writing feedback - Writing | UWE Bristol
    - Studiosity - Study support | UWE Bristol for quick feedback on your writing

What do I do if I am concerned about completing this assessment?
It is recommended that you review all of the relevant materials on Blackboard. You can also speak to your module leader for advice and guidance.
UWE Bristol offer a range of Assessment Support Options that you can explore through this link, and both Student Support Advisers and Wellbeing Support are available.
For further information, please see the Student study essentials.

How do I avoid an Assessment Offence on this module?
Use the support above if you feel unable to submit your own work for this module.
Details re assessment offences can be found here academic-conduct-policy-and-academic-misconduct-procedures

Marks and Feedback

Your assessment will be marked according to the following marking criteria.
You can use these to evaluate your own work before you submit.
NOTE – you must have been present in the two Formative Peer Feedback Sessions to be able to reflect on them and claim marks related to them.

Team Portfolio– 70% of portfolio marks

	100-80 Outstanding	79-70 Excellent	69-60 Very Good	59-50 Good	49-40 Adequate	39-30 Poor / Inadequate	29-0 Very Poor
Aims, Objectives and requirements 10%	Aims and objectives clearly stated and exceeded. These satisfy the SMART properties. Outstanding description, analysis, and presentation of the requirements. Requirements are linked to the literature review.	Aims and objectives clearly stated and fully met. Mostly demonstrate SMART properties. Excellent description, analysis, and presentation of the requirements. Some links with the literature review are evidenced.	Aims and objectives clearly stated and have been met. Very good work. Very good description, analysis, and presentation of the requirements.	Aims and objectives clearly stated and have been met to a good extent. Good description, analysis, and presentation of the requirements.	Aims and objectives could be more clearly stated and have been met to some extent. Adequate description, analysis, and presentation of the requirements.	Aims and objectives could be more clearly stated and have been partially met. Poor description, analysis, and presentation of the requirements.	Aims and objectives barely specified, and it is not clear if these have been met. Little or no description, analysis, and presentation of the requirements.

Literature Review 10%	Outstanding analysis of relevant works. Provides critical review of relevant applications and projects. Demonstrates outstanding insight into the problem. Excellent use of appropriate sources (both in quantity and quality). All sources are appropriately cited and referenced. It leads to the requirements section effectively. Excellent Text flow.	Excellent analysis of relevant works. Critical review of relevant applications and research projects included. Demonstrates excellent insight into the problem. Excellent use of appropriate sources, appropriately cited and referenced. Provides some links to support the requirements section.	Very good analysis of relevant works. Critical review of relevant applications and research projects. Demonstrates very good insight into the problem. Good use of sources, appropriately cited and referenced.	Good analysis of relevant works. Good review of relevant applications and/or research projects. Demonstrates good insight into the problem. Good use of sources. Most are appropriately cited and referenced.	Adequate analysis of relevant works. Provides some review of relevant applications but lacks depth. Demonstrates some insight into the problem. Some good use of sources. Sources need to be appropriately cited and referenced.	Poor analysis of relevant works which demonstrates little or no insight into the problem.	Little or no analysis of relevant works is provided.	
Project Planning & Team Roles 10%	Outstanding Breakdown of tasks. Exceptionally well linked to the requirements and a very impressive Gantt Chart. Clear and consistent Risk Register used throughout the project.	Excellent Breakdown of tasks. An Excellent link to the requirements and a very good Gantt Chart. An Excellent analysis of risks and planning against their impacts on the project.	Very Good Breakdown of tasks. A Very Good attempt to link to requirements and to develop a Gantt Chart. A Very Good presentation of risks and assessment of their impacts on the plan.	Good Breakdown of tasks. A Good attempt to link to requirements and to develop a Gantt Chart. A Good attempt to present risks and assess their impacts on the plan.	Adequate Breakdown of tasks. An adequate attempt to link to requirements and to develop a Gantt Chart. Basic identification of risks.	Poor breakdown of tasks. Some attempt to produce a Gantt Chart. Lack of clarity in task dependency and resource allocation.	Little or no planning. No diagrams or Gantt chart provided.	

Technical Solution & Output 10%	Code is highly optimized, elegantly structured, and robust. Showcases advanced coding practices. Output is polished, insightful, and demonstrates genuine innovation or advanced visualisation.	Code is highly robust and clean. Demonstrates efficiency and sophisticated technical choices. Output is highly professional and effective, clearly communicating complex results.	Code is clean, well-structured, and efficient. The output artefact is professional, interactive, and effectively communicates the results.	Code is generally functional and logical, but minor structural issues or lack of efficiency may be present. Output is clear and achieves its purpose well.	Code is functional but poorly structured; minor bugs present. Output artefact is basic but demonstrates the system's intended purpose.	Code is fundamentally flawed or non-functional. The deployed output is missing or fails to demonstrate the system's core functions.	Code is missing or completely non-functional. No demonstrable attempt at a deployed output.	
Process Evidence 10%	Process logs are detailed, proactive, and used for genuine problem-solving. Shows sophisticated use of agile tools and a highly efficient, demonstrably shared technical platform. Version control history is immaculate.	Process logs are comprehensive and consistently updated. Shows effective use of agile tools and demonstrates strong evidence of a shared technical platform. Version control history is excellent.	Clear evidence of consistent agile practices (e.g., task tracking, sprint reviews). Version control history shows regular, collaborative work from all members.	Basic process log submitted showing task allocation and some agile evidence (e.g., initial sprint). Version control shows irregular/uneven commits but overall contribution is evident.	Basic process log submitted showing task allocation and some agile evidence (e.g., initial sprint). Version control shows irregular/uneven commits.	Process logs are missing, incomplete, or show no adoption of agile methods. Roles are unclear. Little evidence of shared version control.	Process logs are missing or completely unusable. No adoption of collaborative tools.	

Overall Project Quality & Documentation 10%	Uses appropriate terminology accurately and compellingly throughout the code, report, and visualizations. Professionally and impressively presented in all formats (layout, logic, style). Grammatically of an extremely high standard. Technical contribution is outstanding. Documentation and code structure clearly reflect a structured data science methodology (e.g., TDSP)."	Uses appropriate terminology accurately. Professionally presented in both layout on the page and logical structure. Very well presented in an appropriate style. Grammatically of a very high standard. Technical contribution is excellent.	A good grasp of the appropriate terminology. Well presented in both layout on the page and logical structure. Presented in an appropriate style. Good grammatical standard. Technical contribution is very good.	Mostly uses appropriate terminology. Well presented in both layout on the page and logical structure. Presented in reasonable way which allows it to be easily read. Lacking in clarity and grammatical structure in a few places. Technical contribution is good.	Often fails to use appropriate terminology. May lack in layout and/or logical structure. May show a lack of clarity and comprehension. Lacking grammatical structure. Technical contribution is adequate.	Lack of or inaccurate use of the appropriate terminology. Typically fails to accurately or completely describe the work done. Will often contain little indication of which parts of the problem are understood and which are not. Often shows a lack of structure, comprehension, clarity and grammatical quality. Technical contribution is poor.	No use of the appropriate terminology. Fails to describe the problem and the work done. Shows a severe lack of structure, comprehension, clarity and grammatical quality. Technical contribution is insignificant.	

Evaluation & Lessons Learned 10%	Outstanding analysis of the initial Risk Register, detailing which threats materialized and how mitigation strategies were implemented and adapted. Future planning is precise and actionable. Outstanding reflection on test results. Have utilised Formative Mentor and Peer Feedback to substantially improve their work.	Strong analysis of the Risk Register. Clearly considers achievements and learning opportunities exploited. Addresses shortfalls with appropriate suggestions for actionable forward planning. Strong reflection on test results and process. Have utilised Formative Mentor and Peer Feedback to considerably improve their work.	Identifies areas for improvement and discusses the impact of shortfalls. Provides concrete suggestions for next steps in the project's development. Good reflection on test results, with basic commentary on how initial risks were handled.	Attempts to identify where efforts did not deliver and raises relevant questions about future work. Provides a basic plan for what needs to be done further. Mentions risks but provides little detail on mitigation or impact.	Mostly a descriptive account of successes and missed opportunities. Does not explore any alternative approaches or methodologies that could have been utilised. Risk reflection is absent or superficial.	Finds difficulty in articulating and evaluative account, often repeating parts from different sections, without demonstrating an ability to consider a remedial plan.	Little or no effort or clarity of thought to consider poor outcomes and potentially better options that could have been chosen. No mention of risk management.	

Individual Reflective Essay – 30% of portfolio marks

	100-80 Outstanding	79-70 Excellent	69-60 Very Good	59-50 Good	49-40 Adequate	39-30 Poor / Inadequate	29-0 Very Poor
Individual Reflection & Personal Learning 10%	Provides deep, critical analysis of personal contribution, linking individual actions to project outcomes. Demonstrates outstanding insight into the value and functions of different data science roles and skills within the team. Analyses and evaluates the effectiveness of the team's inclusive practices. Highly specific and actionable future learning goals are defined and justified.	Offers a strong analytical evaluation of personal contribution and performance. Clearly articulates what was learned about the required skills for different data science roles. Clearly describes the team's approach to inclusivity and its impact. Learning goals are clear and relevant to future professional development.	Presents a clear and reasoned evaluation of individual contribution and role. Recognises the functions of different data science roles and how they contributed to the project. Recognises the importance of inclusive team practices. Learning goals are present and generally appropriate.	Provides a good, descriptive account of the student's tasks and contributions. Briefly mentions the roles team members played. Basic recognition that the team aimed for an inclusive environment. Learning goals are present but vague.	Mostly a descriptive account of tasks completed. Fails to analyse team dynamics, different roles, or inclusivity. Recognizes basic successes/failures, but lacks genuine critical self-analysis. Learning goals are generic.	Presents an account that is largely anecdotal or inconsistent with process evidence. Fails to identify clear learning opportunities or demonstrate self-awareness of personal impact on the team or the functions of other roles.	Little or no attempt at reflection or self-analysis. No mention of team dynamics, different roles, personal contribution, or learning.
Reflection on Self- and Peer Review 10%	Provides a detailed and insightful analysis of how conflicting mentor/peer feedback was reconciled and applied.	Offers a thorough critique of the self-assessment vs. peer feedback. Clearly explains how formative feedback	Clearly addresses the self-assessment and the peer review process. Identifies one or two specific instances where feedback	Mentions receiving peer and mentor feedback. Provides a basic statement that feedback was incorporated, with minimal specific	Mentions receiving feedback but offers little detail on its application or value. Self-assessment is basic and may	Feedback is mentioned but dismissed, or the essay fails to connect feedback received to any	No mention or evidence of engagement with the self- or peer-review process.

	Demonstrates substantial, measurable improvement directly attributable to the feedback loop. Excellent self-assessment validated by peer review.	(mentor/peer) was used to considerably improve one or more components of the project.	led to necessary changes in the project or code.	detail on the outcome.	not fully align with peer input.	specific action taken.	
Ethical, Legal & Tool Use (GenAI/ Studiosity) 10%	Provides a nuanced, critical discussion of the ethical and legal risks specific to the chosen topic and data (public source). Rigorously analyses the opportunities and significant limitations of GenAI and the writing feedback tools (detailing how they were used and their overall impact on learning and project quality).	Clearly addresses relevant ethical and legal considerations for the project, demonstrating awareness of the data source and PII risk. Provides an excellent and justified analysis of the benefits and limitations of GenAI and writing tools, explaining the specific tasks they were applied to.	Identifies basic ethical and legal risks related to the chosen topic. Acknowledges the use of a public dataset and comments on PII. Provides a good, focused reflection on how GenAI and writing tools were used, clearly articulating a specific benefit and/or a limitation of each.	Briefly mentions ethics and GenAI use. Description of GenAI use is vague (e.g., 'for coding') but notes a generic benefit. Mentions using the writing feedback tool, but with no detail on its specific purpose or impact.	Briefly mentions GenAI use but lacks justification or critique. Fails to mention or address any ethical or legal considerations relevant to the data source, PII, or the chosen topic's societal impact.	Fails to mention GenAI or writing tools, or use is mentioned without any critical reflection on purpose, benefit, or limitation.	No mention of GenAI, ethical consideratio ns, or writing tools.

1. In line with UWE Bristol's Assessment Content Limit Policy (formerly the Word Count Policy), word count includes all text, including (but not limited to): the main body of text (including headings), all citations (both in and out of brackets), text boxes, tables and graphs, figures and diagrams, quotes, lists.
2. UWE Bristol's Academic Conduct Policy and Academic Misconduct Procedures (Assessment Offence Policy) is available from the Academic Integrity webpages and requires that you submit work that is entirely your own and reflects your own learning, so it is important to:
    - Ensure you reference all sources used, using the UWE Harvard system (amend as appropriate) and the guidance available on UWE's Study Skills referencing pages.
    - Refer to peer reviewed primary sources, rather than using AI or secondary sources
    - Avoid copying and pasting any work into this assessment, including your own previous assessments, work from other students or internet sources
    - Develop your own style, arguments and wording, so avoid copying sources and changing individual words but keeping, essentially, the same sentences and/or structures from other sources
    - Never give your work to others who may copy it
    - If an individual assessment, develop your own work and preparation, and do not allow anyone to make amends on your work (including proof-readers, who may highlight issues but not edit the work).

When submitting your work, you will be required to confirm that the work is your own, and text-matching software and other methods are routinely used to check submissions against other submissions to the university and internet sources. Details of what constitutes plagiarism and how to avoid it can be found on UWE's Study Skills pages about avoiding plagiarism.

When submitting your work, you will be required to confirm that the work is your own, and text-matching software and other methods are routinely used to check submissions against other submissions to the university and internet sources. Details of what constitutes plagiarism and how to avoid it can be found on UWE's Study Skills pages about avoiding plagiarism
